AMS Integration Into Your System Environment

Optimal Data Exchange Between AMS and Other Applications

AMS is a customizable software for job processing for the heat treatment and coating industry. It offers open interfaces and numerous integration options and can therefore be perfectly adapted to your needs.

The connection options include, among other things, integration with process control systems, software from the testing and measuring equipment technology, logistics software and multi-carrier systems, data exchange, communication / collaboration and ticket systems, financial accounting, document management, BI, and much more.

At the same time, AMS always delivers the proven and standardized range of functions.

Individual projects and optimizations are part of the standards of TTC. This combines the best of both worlds: you receive standard software for day-to-day job processing and at the same time the unique selling points and requirements of your business are supported in the best possible way.

Convince yourself of the versatile possibilities.

Choose AMS. Your software should be as unique as your range of services.
