

AMS LetMeShip

Quick shipment of your goods via a connection of AMS with the shipping platform *LetMeShip*

You want your customers to receive their goods as quickly and cheaply as possible without having to extensively search online for the best carrier?

Then use the AMS interface for the multi-carrier shipping platform *LetMeShip* and select the matching shipper directly in AMS. Simply enter the dimensions, weight,

and shipping type of your package, and select the suitable carrier from a list. You can print out the shipping labels with AMS customer data on it using your label printer. It could not be any more practical!

LetMeShip
simplify shipping

Your Advantages

Quicker Workflow

Hiring the carrier and printing the shipping label directly in AMS

Cheaper Prices

Individual price conditions with the carriers can be accepted via *LetMeShip*

Simple Usage

Comfortable pre-selection of the carriers according to individual settings in AMS

Transparent Documentation

Assigning the *LetMeShip* shipping order to an AMS job item

Automated Recharging

LetMeShip shipping prices are directly indicated in AMS in the customer invoice

Flexible Pricing

Surcharges, discounts or free shipping can be easily configured

Overview of the Functions of AMS^{LetMeShip} Interface

Selection of the Shipped Goods

Registering the goods for shipping with AMS^{LetMeShip} is done by scanning barcode on the delivery note or on the worksheet. Alternatively, you could use a list selection.

Carrier Selection can be Configured in Advance

You can set which carrier should be available for the shipping process in the AMS module Administration. Displaying a complete list from *LetMeShip* without a pre-selection is also possible.

Shipping Labels and Goods Value

The shipping labels are created from within AMS. They are then assigned to a job item. When ordering a *LetMeShip* dispatch label, you can split one job item into multiple packages. A separate label is created for each package. The labels can also be exported to third-party systems (e.g., SAP).

Shipping Cost Calculation

The calculation of the costs for the goods shipment is done in the *LetMeShip* account. Applying individual framework contracts or price conditions is possible.

The shipment costs can be directly calculated in the AMS customer invoice if the assignment to a customer or a job is done.

AMS^{LetMeShip} also offers the option to add percentage rates to the shipping amount, indicate absolute prices or customer discounts up to setting a free shipping.

AMS^{LetMeShip} Processes

the Following Shipping Data

- Dimensions of the package / Weight
- Number
- Recipient (customer or supplier)
- Shipment type (package, document, pallet)
- Secured shipping
- Shipping methods (standard, express)
- Pickup date
- ExWorks shipment options

Documentation of the Past Shipments

Creating a filterable list of goods sent according to set time frames is possible at any time. It contains label id, carrier tracking number and additional info (e.g. job item number).

Tracking and Notifications

The tracking number of the shipped goods transmitted by *LetMeShip* is assigned to a job item and saved.

Using the AMS^{LetMeShip} Interface in following AMS-Modules:

- AMS Dispatch
- AMS Jobs
- AMS Quality Test
- AMS Administration
(input of individual default settings)

Shipping Notifications

AMS can send an e-mail notification about the successful shipping to the contact person of the customer/supplier or any desired e-mail address.
