AMS^{PT} Planning Table

Save Time, Reduce Costs, Plan Flexibly

Plan your processes easily and in a resource-optimized manner using the AMS^{PT} Planning Table:
With this practical add-on module, you can display production jobs in a clear production planning layout. Planning information can be securely transmitted to the production site in an easy-to-understand format. Misunderstandings are avoided. In addition, you also reduce the equipment time usage and improve your on-time delivery quota.

> *"Thanks to the AMS Planning Table, our employees are always reliably informed about the next jobs and the load list is created directly during the planning. We were also able to significantly increase our flexibility."*
> — *Christoph Lugmair, Production Manager at Rubig Heat Treatment*

Your Benefits

Keeping Deadlines
EDP-supported pre-planning reveals bottlenecks and avoids delivery delays

Identify Conflicts
Automatic AMS notifications support your planning

Reduce Costs
Optimal equipment utilization saves energy

Provide Reliable Information
Distribute the planning as a comprehensible graphic

Optimize Processes
Analysis of past processes increases efficiency

An Overview of the Functions of the AMS^{PT} Planning Table

A Graphic Overview of the Planned (or Past) Production Jobs Including the Following Information is Possible:

· Start and end date
· Run time
· Customer number, reference, short name
· Job number
· Load information
  (e.g., number, dimension, weight, etc.)
· Program number
· Target and actual duration
· Treatment instruction
· Work schedule
  (holding time, temperature, etc.)
· Equipment description
· Serial number

Airport View
Display the current planning table on monitors in other departments or in the factory hall

Monitoring Deadlines
When planning the treatment steps, AMS calculates estimateded time of completion based on current data and provides assistance if it is not possible to meet delivery deadlines due to the necessary work steps.

Drag and Drop
Adding items from other modules can be done simply by dragging and dropping them to the desired location on the planning table.

Integration of the Planning Table Functions in the Modules:
· AMS Jobs
· AMS Charging
· AMS Maintenance Book

Warnings or Notices for:
· Blocked articles
· Time conflict with other jobs or work steps
· Exceeding the time constraints of the production deadline
· Lack of cost coverage (minimum sales)
· Alarm in the process control system
· Incorrect assignment to equipment (regarding the treatment type or loading)
· Deviating equipment capacity

Numerous other checks and aids to avoid planning errors.

Search Function / Filter
The search function can be used to select items intended for the planning from the module Jobs, Charging, or Maintenance Book via the search criteria and filter and then transfer them to the planning table.

Individual Design Options for the Planning Board in the AMS Administration Area
Configure the presentation type (e.g., color) and the information density for the planning table in advance for a specific customer is possible in the AMS Administration.

Required Licences:

AMS^{PT} Planning Table incl. Airport View

Recommended Additional AMS Licenses:

AMS^{WB} Maintenance Book
AMS^{mPT} Mobile Planning Table
AMS^{mWB} Mobile Maintenance Book
