

AMS Stock Keeping

Better Overview, Faster Processes, Better Warehouse Control

The AMS Stock Keeping offers a modern and efficient solution for controlling all warehouse processes. The structured visual representation of warehouse areas enables a quick overview of inventory, empty packaging, and warehouse movements. This simplifies workflows and optimizes the warehouse. Individual job items can be specifically queried including storage location and shelf compartment. The warehouse information is available across

modules and supports smooth collaboration between departments. The integrated search and filter functions facilitate management and quick access to relevant item information.

Through the connection with the Mobile Stock Keeping AMS^{mSK} or the use of mobile barcode scanners, goods receipts, issues, and transfers as well as inventory checks can be carried out quickly and easily directly on site.

Your Benefits

Visual Representation of Storage Areas
Item locations can be accessed as a color-coded and clear graphic

Faster Processes through Digital Inventory Management
Stock Keeping directly on-site possible via mobile application

Real-Time Overview of Goods Movements and Stock Levels
Entered data is centrally available in AMS

Safety-Relevant Functions Integrated
Detailed labeling of hazardous materials and restricted items

An Overview of the Functions of AMS Stock Keeping

General Features:

- Clear visualization of the warehouse
- Configure barcodes/QR codes for all storage locations
- Display detailed item information
- Logging warehouse actions:
 - Store items (from purchase orders or as free items)
 - Relocate items
 - Remove items
 - Inventory adjustments
- Conduct inventories/create lists
- Assign cost centers when removing an item
- Query inventory history for any periods
- Warehouse actions optionally executable with barcode scanner
- Queries about the location of packaging/job items
- Place items in a quarantine warehouse
- Assign images to items
- Labeling of hazardous materials
- Statistical evaluation of inventory
- Linking with the modules AMS^{OS} Ordering System and AMS^{MB} Maintenance Book optionally possible

Comprehensive filter functions and visual display of search results for:

- Job items
- Consumables
- Storage locations
- Packaging

The following search parameters are possible:

- (Part) Description
- Customer/Customer number
- Delivery/Return transport
- Delivery/Return packaging
- Material number/material type description

The Stock Keeping manages the following warehouse objects:

- Unprocessed goods
- Partially processed goods
- Finished goods
- Packaging
- Consumables

Stationary and Mobile Application Possible

Thanks to the combination of desktop application and mobile app, warehouse actions can be carried out and documented directly.

Display via Large Screens

To support warehouse staff, storage locations and warehouse contents can be displayed on a large screen.

Setup via AMS Administration

The creation of storage areas and storage locations used in Stock Keeping is defined once by coordinates in the AMS Administration. The coordinates are counted either numerically or alphabetically. Assigning alias names for quicker orientation in the warehouse is possible.

Required Licenses:

AMS^{mSK} Mobile Stock Keeping including stationary Stock Keeping

Other Functionally Suitable AMS Extensions and Modules:

AMS^{OS} Ordering System

AMS^{MB} Maintenance Book

AMS^{mWB} Mobile Maintenance Book
